Mounting accessories

Mounting brackets MB

Mounting brackets are used to secure the lift by two fixing points in line with building regulations. They reduce vibration and ensure that the lift remains stable.

Variable mounting brackets (MB-V) allow for quick and easy height adjustment of the lift if installed behind a false ceiling.

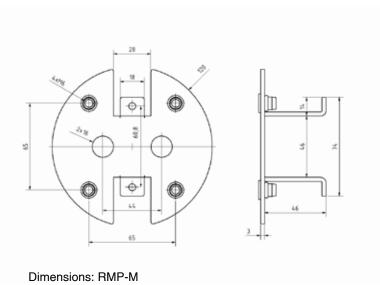

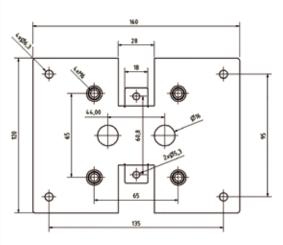

Mounting bracket RCMP- M

The rectangular mounting plate (RCMP- M) is used to fit rectangular or linear luminaires weighing up to 50kg. White, RAL 9010.

A mounting plate (RCMP-CS) to the customers own specification can be provided if required.

Dimensions: RCMP-M
